Mathematical Biosciences

an international journal

Volume 155

A. Dewanji, M.J. Goddard, D. Krewski and S.H. Moolgavkar, Two stage model for carcinogenesis: number and size distributions of premalignant clones in longitudinal studies 1

C.M. Fleck, H. Schöllnberger, M.M. Kottbauer, T. Dockal and U. Prüfert, Modeling radioprotective mechanisms in the dose effect relation at low doses and low dose rates of ionizing radiation 13

A. Yakovlev , K. Boucher and J. DiSario, Modeling insight into spontaneous regression of tumors 45

K.G. Magnússon, Destabilizing effect of cannibalism on a structured predator–prey system 61

J.M. Hyman, J. Li and E.A. Stanley, The differential infectivity and staged progression models for the transmission of HIV 77

B. Daya and G.A. Chauvet, On the role of anatomy in learning by the cerebellar cortex 111

P.F. Ho and C.Y. Wang, Cluster growth by mitosis 139
